

Frontend Task

Media Player Task for Courses

Requirements

- Create a component that displays a list of videos using React.
- Use a video player library like React Player to play videos.
- Pass video URLs from a data source such as a JSON array.
- Track the video's watch progress when played.
- When 80% or more of the video is watched, update its status to "Watched".
- Store the watch status in state or Local Storage to persist data after a page refresh.
- Display an indicator or mark next to videos that have been watched.
- Ensure the player supports different video formats such as MP4 or YouTube links.
- Write clean, reusable code and use React Hooks for state management.
- (Optional) Improve the UI with CSS or a library like Tailwind CSS.
- Design Reference : [_Course Player UI](#)
